How to Use the Chart

Choosing the Right Range

You will notice the positions are separated into columns. Once you establish your position at the table, you use the appropriate column and find the row that fits the situation.

- The Open Raise row is used if action folds to you and the pot has not been raised.
- The 4-bet and Call 3-Bet rows are used if you have open raised and been 3-bet. If you do not have a hand that falls into the ranges listed, you fold.
- The 3-bet and Call Raise rows are used if an opponent open-raises from EP or MP.
- The Resteal and Call Steal rows are used if an opponent has open-raised from the CO or BTN.
- To further clarify. A steal is an open raise from the CO, BTN, or SB regardless of hand strength. It's all about the position, not the actual hand.

Sizing Raises

The raise size is listed, when appropriate. The sizing is based on the number of big blinds or the current raise size.

- For open raising, if you see 3x that means 3 times the big blind. So, if the big blind is .50, you would raise to \$1.50.
- For reraising, sizing is based on the raise size. For example, if an opponent open raises to 3 big blinds and you are supposed to 3-bet 4x, you would 3-bet to 12 big blinds.

Hand Range Short Hand

To save space on the charts, I use a common hand range shorthand. It may take a bit to master, but once you do you will appreciate the simplicity.

- Here are the guidelines:
 - If applicable, pairs come first. You will either see a single pair, like 66 for example. This means 66+ and includes all pairs from 66 up to AA. If you see a range, like 88-JJ, that means 88, 99, TT, and JJ.
 - If you see a single hand listed, it includes both suited and unsuited and all hands greater. For example, X9 is all non-pair hands where the kicker is at least a 9. This would include K9s+, Q9s+, J9s+, T9s+, K9o+, Q9o+, J9o+, and T9o+.
 - XJT means all hands with an unsuited kicker Jack or better and all suited hands with a Ten kicker or better. So 55+, ATs+, ATo+, KTs+, KJo+, QTs+, QJo, JTs
